

Category 7A Shielded - Clipsal by Schneider Electric

Category 7A Shielded

Clipsal's Actassi Category 7A GG45 can do it all...

The Actassi Cat. 7A GG45 solution is specifically designed to support the increase in demand to transmit large volumes of data at high speeds. With the design of the cable and connector, it overcomes the challenges needed to do this without interference. The backwards compatibility of the connector makes it ideal to use with RJ45 patch cords today, and in the future when active equipment supports GG45, a change in patch cords to the GG45 patch cord will provide the next step in high speed data transmission. This type of solution is highly recommended when the installation replacement cost is high; for critical applications where downtime must be avoided; and for applications requiring high bandwidth functions.

Features and benefits

- 12-contact RJ45 footprint
- Backwards compatible with Cat. 5E to Cat. 6A patch cords
- S/FTP cable stripping and termination tools for consistent terminations
- S/FTP individually foiled and has an overall braid cable to provide superior noise immunity
- LSZH orange sheath complies with Green Star rating
- 10m and 20m GG45 patch cords for consolidation point installations
