Smoke & Heat Alarms

CLIPSAL®

The NEW Smoke & Heat Alarm Range

Built for Protection in Modern Homes

Clipsal's new 220-240V Smoke & Heat Alarm range delivers dependable detection, with simple upgrades and seamless compatibility for existing installations.

- **Smoke alarms provide early warning:** essential for bedrooms and hallways, where fast alerts save lives.
- **Heat alarms allow for protection in high nuisance areas:** ideal for kitchens, garages, and laundries where smoke alarm use is discouraged as particles that cause false alarming like smoke and steam are common. Mandatory in short-term rental accommodation (NSW STRA).

All devices work together as one interconnected system. Together, the range provides a complete home protection solution.

Designed to meet the latest standards and installation requirements, this range supports safer homes, today and into the future.
