

In Get Wired with C-Bus this month, explore the latest updates from our new firmware release, including Apple HomeKit Integration with C-Bus, an enhanced C-Bus Manager app UI, improved security features in the mobile app and a new Climate widget available across the mobile app and touchscreen.

Training resources and supporting materials are also available to help you get the most out of these new capabilities. Stay tuned for more updates!

C-Bus Controllers - Firmware V2.5.0 Release

CONTROL YOUR HOME, YOUR WAY - Apple HomeKit Integration

C-Bus Controllers now support a plugin for the Apple HomeKit smartphone application. Loads connected to C-Bus can be controlled using HomeKit app's native interface or voice control, helping to integrate C-Bus and Apple into a single ecosystem.

ENHANCED MANAGER UI EXPERIENCE - Improved C-Bus Manager App

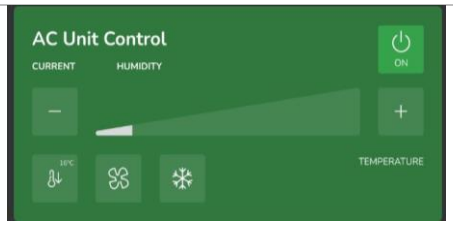

The C-Bus Manager app has been redesigned to deliver a more intuitive and efficient user experience. The updated layout helps to optimise space utilisation, enabling more widgets per view and faster access to key information. UI scaling issues have been resolved, helping to ensure consistent responsiveness across a wide range of screen sizes; additionally, several bug fixes have been implemented to help enhance overall usability, readability and user adoption.

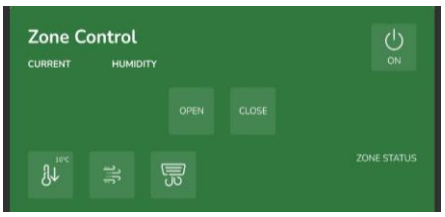

BEFORE	AFTER
	

SMARTER COMFORT, SEAMLESS CONTROL - Climate Control Widget

A new Climate Control Widget has been introduced to help simplify the management of heating and cooling. Designed for ease of use, it helps to provide intuitive control to your customer while helping to enhance overall comfort. There are two main types of the Climate Control Widget:

- AC Unit Control Widget to control a specific AC unit
- Zone Control Widget to provide control of a designated air-conditioned zone

STRONGER SECURITY AND SMOOTHER EXPERIENCE - Mobile App

Multi-factor Authentication (MFA) has been introduced to add an extra layer of security with one-time passwords. This will better protect your customers' accounts and devices. The login security has also been enhanced to improve protection against unauthorised access which includes smart limits on repeated login attempts. UI Improvements and bug fixes have also taken place to create a smoother app experience. The platform has been updated to support Android 16KB Memory Page Size, ensuring compliance with Android and Google Play requirements.

Note: Upon their next use of the mobile app, users will see an automatic pop-up notification requesting them to install the latest version. This update is essential to maintain app functionality and performance. For devices running Android 15 and above, installing the latest version is critical, as earlier versions of the app may experience crashes without this update.

LATEST FIRMWARE DOWNLOAD

Latest Firmware version 2.5.0 now available from **C-Bus Software and Firmware**

Additional release notes can be found here: **Release Notes for V2.5.0**

IMPORTANT COMPATIBILITY NOTE

Windows on ARM processors (e.g. Snapdragon X Elite or X Plus laptops) are currently not fully supported with C-Bus SpaceLogic Commissioning and associated software.

ADDITIONAL C-BUS TRAINING CONTENT

WE WOULD LOVE TO HEAR FROM YOU

We are expanding our approach by bringing you in earlier into the development process to make sure whatever we do has been built to fully optimise your needs. This includes workshops and testing at different phases so we can adapt as we go and deliver the best enhancements and features we can. If you are not already involved and would like to be, please let your C-Bus Account Manager know and we will be in touch to arrange an online call with you.
