Life Is On | Schneider Electric

A world of control awaits you.
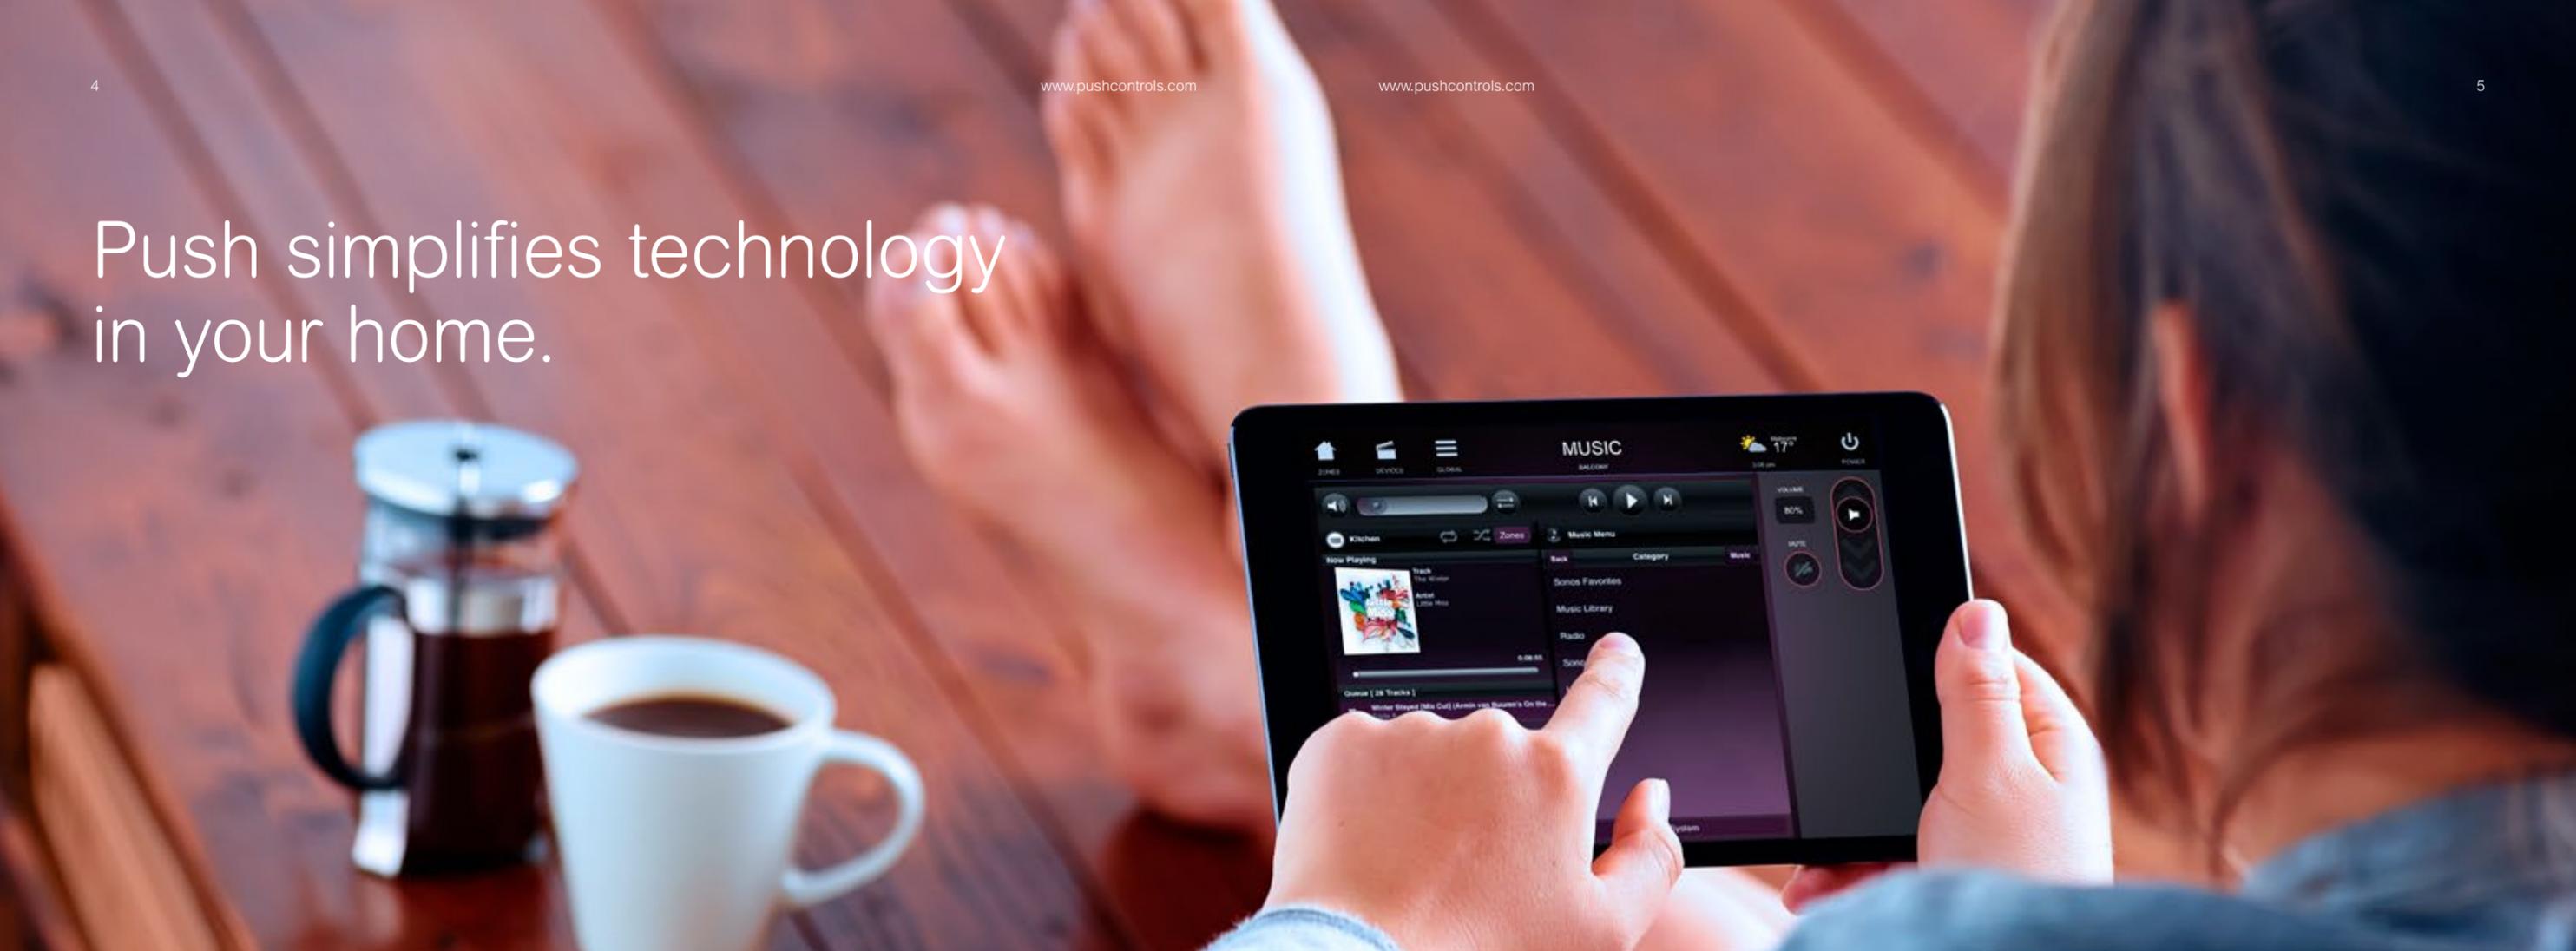

Life Is On | Schneider Electric

Welcome to the world of Push, where a hive of entertainment and control is in the palm of your hands.

At the push of a button curtains open, lights turn on, your music starts playing, the TV switches to your favourite channel, air conditioning turns on ... and these are just a few of the things Push is capable of controlling.

Your new home comes fully equipped with this revolutionary system, which works on both Apple® and Android™ smartphones and tablets.

Life Is On | Schneider Electric

Push simplifies technology in your home.

Push gives you the simplicity you've been waiting for, empowering you to take control of your home's technology.

Push creates a 'smart home', allowing you to operate all electronic devices from one device, such as a tablet or smartphone. The result is greater connectivity, simplicity, comfort, and control.

Connectivity

Push allows you to seamlessly interact with present and future technology throughout your home from one simple device. You'll no longer be at the mercy of complex electronic devices and juggling multiple remote controls.
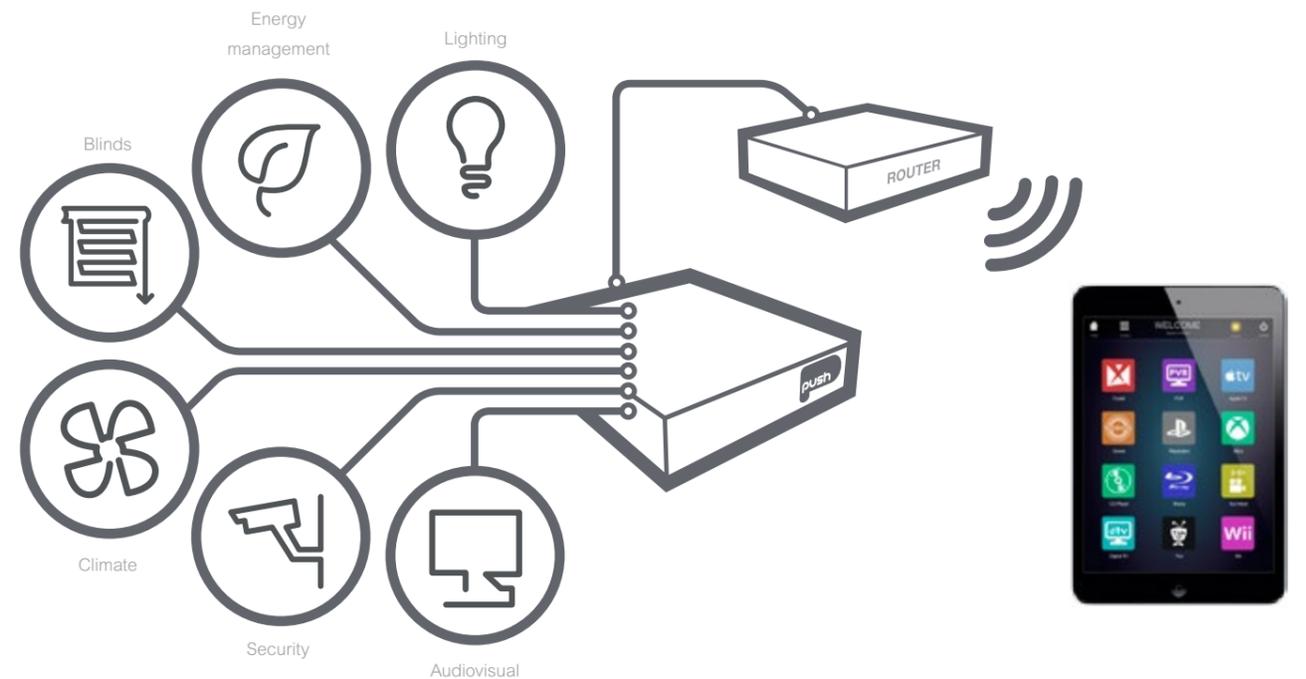

Simplicity

If there was one word to describe Push, it would be simple; from one device a simple button press can activate your home entertainment system, turn off all your lights, or activate your security system — and that's just the beginning.

Comfort

Whether you're entertaining outdoors or relaxing inside, you'll enjoy the comfort of conveniently controlling your technology anywhere in the home.

Control

Push lets you take charge — control your home, your way, when you want, how you want.

Energy management

Lighting

Blinds

ROUTER

Climate

Security

Audiovisual

How does Push work?

Push connects all your home technology. Using either your smartphone or tablet, Push wirelessly communicates with your home network.

The Push Control Processor sits on the network and relays the messages to each of your devices — it's that simple!

## Complete control at your fingertips

Lighting control

Forget running from room to room turning lights off or paying for power you're not using. The Push Lighting Control Module simplifies your lighting and gives you complete control from one device.

You can switch your lights on/off, dim light levels, and programme lighting to suit your mood, all while enjoying energy-efficiency benefits.

Audiovisual control

Today's modern home is often equipped with numerous audiovisual (AV) devices, including TVs, DVD players, gaming consoles, set-top boxes, and more. Push creates harmony between your AV devices by streamlining everything to work from one device at the simple push of a button.

Security control

Thanks to Push Security Control, you don't have to worry about leaving the front door unlocked. You can conveniently activate your security system from the comfort of your bedroom or anywhere in your home.

With Push, you can also view cameras and control locks and intercoms — making protecting your home, family, and possessions easier than ever.

Automated blinds control

The Push Blinds Control Module allows you to open or close blinds individually or all together. Not only will you improve energy efficiency, but you'll have greater control of ambient light and temperature. Link blinds and lighting control to create 'scenes' in your home.
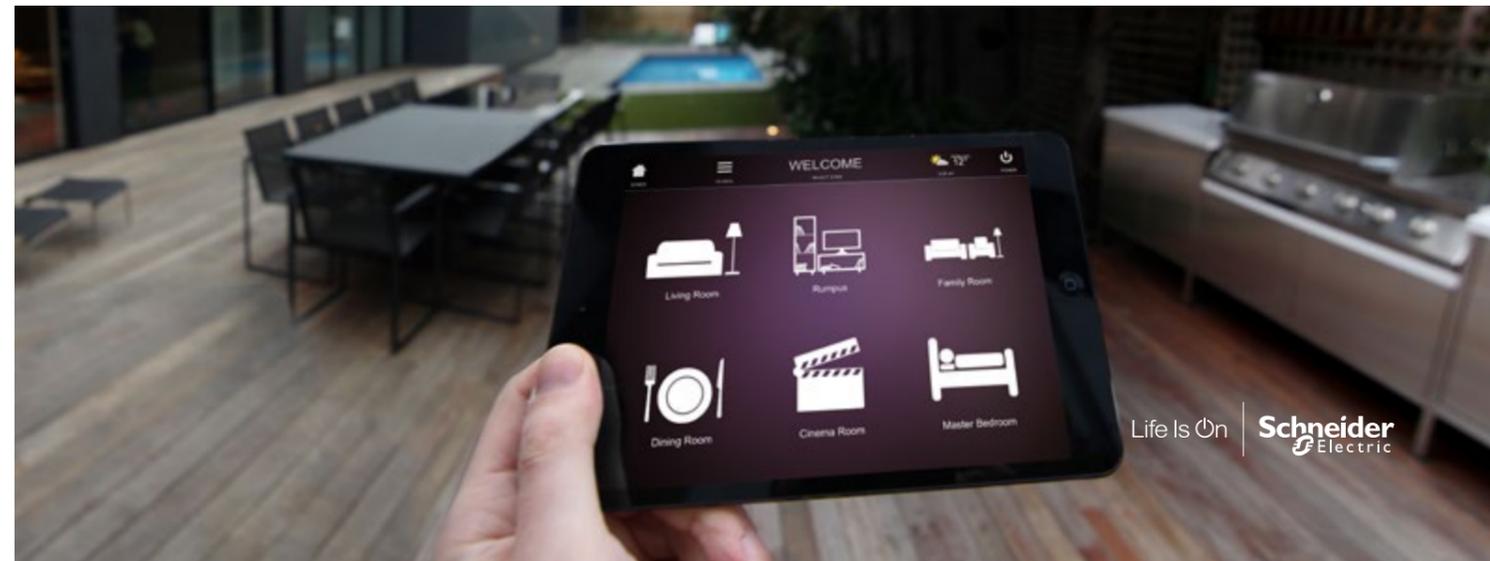

Climate and energy-management control

Enjoy the perfect temperature throughout your home all year round. Simply tap on the Push Climate Control Module and set your air conditioning to the exact temperature you want.

At the touch of a button on your device, you can see exactly how much energy you're consuming and where. The Push Energy Management Control Module allows you to gain a better understanding of your energy consumption, so you can monitor, manage, and mitigate your home's power consumption.

Fully installed

Your Push System is fully installed by a qualified installer so you don't have to worry about a thing. Backed by an expert company, our support network has nationwide coverage.

Once your system is installed, your installer will complete a handover with you and walk you through the aspects of your new Push system. You can easily upgrade and add to your system during and after the installation in consultation with your installer.
