

In Get Wired with C-Bus this month, get the latest on software enhancements and the newest features available in the Clipsal C-Bus Manager App, including training content to support this launch. Our Software Development team are getting closer to the goal where you will be able to commission an entire new project in C-Bus Commission. Keep watching this space!

C-BUS COMMISSION ENHANCEMENTS V2.13.0

Improved commissioning and workflow efficiencies with DALI-2 continue to be a key focus, plus we have some new features to share to help save you time. **THANK YOU** to those who have been involved in the trials.

Now available from Software Updates as a bundle with the latest versions of all the C-Bus tools you need. Here are the highlights:

SIMPLIFY MY LIFE - Popular devices now available in C-Bus Commission

Four of the main C-Bus sensors and the C-Bus 30 & 40 mechs can now be configured and programmed in C-Bus Commission. All of the new & critical devices have now been transitioned… watch this space!
Note: C-Bus Commission software supports programming of devices that contain the latest firmware.

Quick Start Guide - Sensors
Quick Start Guide - 30 & 40 mech

SPEED ME UP - Rapid creation of application data and editing multiple DALI-2 devices at once

A new feature has been added to quickly and conveniently create C-Bus Application items by a simple click of a button in the Properties window (for a C-Bus device), which eliminates the need to create items manually across multiple Applications.

C-Bus Application items that can be easily created include:

Error channels for Error Application	Trigger Group and Action Selectors
Error channels Measurement Application	Devices for the Emergency Exit Light Application (C-Bus DALI-2 Gateway only)
Enable Group and Values	

The new “Edit DALI Devices” option replaces the previous “DALI Group Membership” option, expanding this feature to include other DALI device properties as well, namely levels, DALI Scenes, LED Dimming Curve.

TEST ME OUT - Improved DALI line Live Control

For ease of identification and testing of all DALI-2 devices on a live DALI line, you can now toggle and flash (incl. interval timing) from C-Bus Commission software. This allows testing directly from software or the front panel buttons of the DALI-2 Gateway.

Quick Start Guide - Bulk Application Items *(included in the same Quick Start Guide above)*

WIZARDRY AT WORK - C-Bus Global Programming

For devices configured in C-Bus Commission, use the new global programming feature to perform mass changes across a large number of devices, such as modification of the min/max timing for dimmers; the C-Bus application assigned; timer expiry for blocks & widgets; the unit time and enable/disable for sensors and the turn on level for relays. More wizards to come!

Note: Only for project devices and for those devices configured in C-Bus Commission.

Youtube: Global Programming

MORE WIZARDRY AT WORK - Templates to save time

The new C-Bus Device Templates feature lets you save, reuse and share C-Bus project devices eliminating the need to manually recreate identical, multiple devices in your project. *Refer to the release notes for more details.*

CHANGE ME UP - Editing Project information

After you have created a project you can now edit those details while the project is open or any time in the future, just click on the "edit project" button.

Another time saving feature has also been included in the C-Bus Application workspace. You can now use standard keystrokes when selecting a range or making multiple individual selections.
Example: SHIFT + click, CTRL+ click.

TOOLKIT & SCHEDULE PLUS UPDATES

This release also includes new versions of Toolkit and Schedule Plus to ensure ongoing compatibility. See the release notes and compatibility matrix for more information. C-Bus Software and Firmware Matrix.

Later this month expect a new release of C-Bus firmware for new generation output devices and C-Bus DALI-2 Gateway. Please look out for this new software release in Software Updates at the end of March.

LATEST CLIPSAL C-BUS MOBILE APP FEATURES (Firmware V2.3.0)

The latest version of the Mobile App includes new features on Timers and Security.

Now with a streamlined way to manage **HOME SECURITY**, the home alarm panel for C-Bus enabled alarms now appears in the Mobile App so your customers can arm/disarm their security system remotely and manage all zones within the house.

Customer can now to create & edit **TIMERS** for lights, dimmers, fans and more, this offers a seamless way to integrate timers into both the mobile app widget and the Manager interface.

WE WOULD LOVE TO HEAR FROM YOU

We are expanding our approach by bringing you in earlier into the development process to make sure whatever we do has been built to fully optimise your needs. This includes workshops and testing at different phases so we can adapt as we go and deliver the best enhancements and features we can. If you are not already involved and would like to be, please let your C-Bus Account Manager know and we will be in touch to arrange an online call with you.
